Timiskaming District

About Planet Youth

Planet Youth is a research organization that works with communities to improve youth well-being and reduce substance use among young people.

The Planet Youth Guidance Program is an upstream, universal prevention initiative. The program is based on the Icelandic Prevention Model that focuses on creating healthy relationships and environments where children and youth can thrive.

Communities survey young people every two years and use the results to understand local strengths and challenges. These results help guide actions that support healthy development and well-being for young people.

The Icelandic Prevention Model

In the 1990s, Iceland had high levels of substance use among young people. Instead of focusing only on punishment or education, Iceland developed a prevention approach that involved families, schools, communities, and governments.

This approach focuses on strengthening protective factors, such as positive family relationships, supportive school environments, and access to organized activities.

Over time, this approach helped reduce youth substance use across the country.

Upstream prevention

Upstream prevention means acting early, before problems start. This approach focuses on improving the conditions that shape young people's daily lives.

Universal prevention

Universal prevention is designed for all children and youth, not only those at higher risk. By building strong, connected communities, universal prevention supports well-being for everyone.

Domains of Intervention

Young people's well-being is shaped by the environments they experience every day.

Key areas include family relationships, school experiences, friendships, leisure time, and digital spaces.

Looking at these areas together helps communities understand where support is working well and where changes may be needed.

The Five Guiding Principles of The Planet Youth Guidance Program

1

Apply a primary prevention approach that is designed to enhance the social environment.

2

Emphasize community action and embrace public schools as the natural hub of the neighborhood/ efforts to support child and adolescent health, learning, and life success.

3

Engage and empower community members to make practical decisions using local, high quality, accessible data and diagnostics.

4

Integrate researchers, policy makers, practitioners, and community members into a unified team dedicated to solving complex, real-world problems.

5

Match the scope of the solution to the scope of the problem, including emphasizing longterm intervention and efforts to marshal adequate community resources.

The 10 core steps of the Planet Youth Guidance Program

Step 1

Local coalition identification, development, and capacity building

Step 2

Funding identification, development, and capacity building

Step 3

Pre-data collection planning and community engagement

Step 4

Data collection and processing, including data driven diagnostics

Step 5

Enhancing community participation and engagement

Step 6

Dissemination of findings

Step 7

Community goal setting and other organized responses to the findings

Step 8

Policy and practice alignment

Step 9

Adolescent immersion in primary prevention environments, activities, and messaging

Step 10

Reflect on the work that has been completed and build upon it by repeating the steps again in a new cycle

Interpreting 2026 Survey Data

When looking at Planet Youth data, it's important to consider whether the data actually matters or makes a difference. To do this, we check if the data helps us make decisions that are relevant, useful, and connected to goals we care about. To help you decide if the data in this report is meaningful, ask yourself:

- Is this number or percentage different from what other communities see or from what we've seen in the past?
- Does this data match what we're hearing from young people and our community?
- Does this data or the changes in it give us a reason to adjust how we work or respond as a community?

The figures in this report are based on young people in the community who reported their own experiences. When looking at this data, keep in mind that how young people see things—and whether some chose not to respond—can affect the results, especially since the amount of data might be small. This doesn't mean the changes aren't meaningful, but it's important to consider these factors when understanding what the data tells us.

Method and Data Collection

Youth in **Grades 10 and 11** who live in **Timiskaming** completed the survey at school during regular class time.

The online survey was anonymous and took about **30** minutes to complete. Participation was voluntary, and students could skip any questions.

The final sample size contains **567** surveys. The total response rate was **76%**. During data cleaning, **62** responses were removed for being incomplete or for stating they had used a fictitious drug.

How to Read These Charts

Some charts compare behaviours across different groups. This helps show patterns in the data.

This chart compares substance use with how aware parents or caregivers are of where youth are in the evenings.

- **Purple bars** show the percentage of youth who report their parents or caregivers usually **know** where they are.
- **Grey bars** show the percentage of youth who report that their parents or caregivers usually **do not know** where they are.

The chart includes:

- Cannabis use at any point in life
- Alcohol use (drunk) in the past 30 days
- Daily cigarette smoking

What this shows

Overall, youth who feel their parents or caregivers know where they are in the evenings are less likely to report substance use than those who feel their parents are less aware of their whereabouts.
